

## How to Mark a Key as Not Lost and Reset Locks from being Disabling Points

1 Select "Keys."

2 Find the lost key and select "Properties."

3 Click the edit icon  in the Lost Key frame.

### Lost Key ?

Status

**Lost!** [4 disabling locks](#) [\(Create Programming Job\)](#)

4 Mark the key as Not Lost and click Save.; This will delete this key from the system. The key may then be issued to a person or used for a mission.

### Changing Lost Key Settings for...

*LOST: Gorski, Jeff (K10002B01)*

#### Settings

- ☐ This key is lost
- ☒ This key is not lost
- ☐ Only include accessible locks

5 [Update the key.](#)

6 Update the locks that were set as disabling points using one of these methods:

- [Programming CyberLocks with Generation 2 CyberKeys](#)
- [Using a Grand Master](#)
- [Using a CyberLock Programmer](#)

**Important** - if the key touches a lock that is still set as a disabling point, the key may not work in ANY lock until the key is updated again.
